

Arrhythmia (Herzschwäche)

Dr. David Walsh—Alabama, August 2001, Updated February 2002

I'm very excited about your product. I could not believe that it actually helped my PVA (Premature Ventricular Contraction), and within a short time. Not only that; I recently developed high blood pressure and it brought it down. It's still working after six months.

Update—September 2003

I stopped taking your product after I finished the bottles because I was cured and didn't need it anymore, and I'm still feeling fine to date.

JR Borbridge—Canada, December 2000

Recently I developed an irregular heartbeat. I would miss a beat, go three or four, miss a beat, go three or four—and there was nothing in particular that I did that would set it off. It would stop for a while, then a few weeks later it would start again. Then after taking the jiaogulan teas for 3 months, it happened again only during the first three weeks and it hasn't happened at all since then.

William Newman—Michigan, June 2002

The condition I had before was a very severe irregular heartbeat. I have been taking for years a large amount of Co Q 10, among other supplements. It has helped, but was still occurring. I still had to be careful. But after taking jiaogulan approx. 2 weeks, I can't believe my activity has increased at least 50%. I couldn't do a lot of stressful activity, climb stairs or a long walk—I would end up with an irregular heartbeat. I have played more golf in the past week than I have played in a week in the past two years.
